A motivated and quick-learning developer passionate about the intersection of AI and software development, continuously learning Kotlin, GoLang and machine learning to create smart and impactful solutions.

SKILLS

- **Frontend Development:** Kotlin (Kobweb), ComposeUI, HTML, CSS
- **Backend Development:** Go (Gin Framework), RESTful APIs, JSON data handling, JWT Authentication
- **Database & Storage:** JSON-based storage, basic SQL knowledge
- Basic knowledge of **Machine Learning** and **Deep Learning** concepts
- Familiar with **Scikit-learn**, **Pandas**, **NumPy**, and **OpenCV**
- Skilled in **Prompt Engineering** for AI-driven content, code generation, and problem solving
- Knowledge of **LangChain**, **OpenAI API**, and **Supabase** AI integrations
- Skilled in **Agentic AI** systems leveraging **Prompt** chaining and tool integration for adaptive workflow automation
- Basic of **Coroutine**, **Flow**
- Basic **CI/CD** knowledge using GitHub Actions
- Version control with **Git & GitHub**
- API **testing** and **debugging**
- Basic project management exposure (**Jira**, **Asana**)
- Team player with effective communication
- Quick learner, adaptable to new technologies
- Strong problem-solving and debugging skills

LANGUAGE

- Kotlin
- GoLang
- C
- Java
- Python
- JavaScript

FRAMEWORK

- Kobweb
- Gin
- Tensorflow
- Django
- PyTorch

TOOLS & TECHNOLOGIES

- IntelliJ IDEA
- VS Code
- Git
- Github
- Postman
- Cursor IDE
- Lovable
- n8n
- Gen AI

EDUCATION

Bachelor of Engineering in ISE (8.1 CGPA)

October 2022 to June 2026

AMC Engineering College Bangalore

10+2 (PCM) (81%) - July 2019 to May 2021

St. Francis School (ISC Board)

10th (All) (79.33%) - July 2018 to May 2019

St. Francis School (ICSE Board)

Project Experience

Kobweb Blog : Full-Stack Technical Blogging Platform [Github Link](#)

Technologies : Kotlin Multiplatform, Kobweb Framework, Compose for Web, Ktor, MongoDB

It allows users to create, explore, and manage technical blogs under multiple categories – all clean, modern UI and seamless backend integration.

- Developed a full-stack blogging platform with Kotlin Multiplatform and Kobweb, integrating frontend, backend, and database.
- Built a dynamic blogging platform with category, search, and auth modules.
- Implemented REST APIs and MongoDB integration for seamless data management and content persistence.

DevConnect: Developer-Client Collaboration Platform [Github Link](#)

Technologies : Go (Gin), WebRTC, WebSocket, JSON, Dummy Payment

Built a Go-based backend enabling real-time chat, video calls (WebRTC), and dummy payments for seamless collaboration between developers and clients. Designed modular APIs with role-based authentication and JSON-based data handling.

- Secure sign-up/login, forgot/reset password with role-based access (Client & Developer).
- WebSocket chat system with message history persistence.
- JSON file-based structured data management.
- Dummy payment simulation.
- CRUD operations for clients, developers, and projects using JSON as structured local storage.
- Independent modules for User Auth, Chat, Video Calls, Payments, and CRUD APIs.
- Modular API design with separate layers for models, routes, and utilities
- Built using the Gin framework with REST APIs for seamless integration.

Portfolio Website : Personal Branding Site [Github Link](#)

Technologies : Kotlin Multiplatform, Kobweb, Compose for Web, Ktor

Responsive portfolio site with contact form, built and deployed using Kobweb and Compose for Web.

- Developed a responsive personal portfolio website to showcase projects, skills, and contact information.
- Integrated a contact form for direct communication using Ktor backend services.
- Designed a clean and modern UI emphasizing performance, accessibility, and responsiveness.

User Module API : A backend system that manages all user-related operations [Github Link](#)

Technologies : Go (Golang) , REST API , JSON .

- Developed a basic User Management API including Login, Registration, and Profile endpoints.

- Built using Go (Golang) with focus on modular, maintainable, and clean code structure.
- Designed API routes following RESTful principles for easy integration with frontend clients.
- Tested endpoints using Postman to ensure reliable and consistent responses.
- Followed best practices for error handling, JSON response formatting, and code readability.
- Covered Validation such as allowed emails & password, Incorrect password and not allowed email message.
